Static Web Table – Functional Validations

1. Count number of rows in the table → Expected: **4**
2. Count number of columns in the table → Expected: **5**
3. Read all data from 2nd row (index 2 → 3rd row including header) → Expected: **Keyboard | Electronics | $79 | 0 | Out of Stock**
4. Read all data from the table (excluding header) → Expected: **4 rows of product data**
5. Print all product names → Expected: **Laptop, Mouse, Keyboard, Monitor**
6. Print products where Stock = 0 → Expected: **Keyboard**
7. Print products where Status = "In Stock" → Expected: **Laptop, Mouse, Monitor**
8. Count number of products "In Stock" → Expected: **3**
9. Count number of products "Out of Stock" → Expected: **1**
10. Get price of a specific product (e.g., Mouse) → Expected: **$29**

Data Processing Validations

11. Calculate total price of all products → Expected: **999 + 29 + 79 + 349 = 1456**
12. Find product with highest price → Expected: **Laptop ($999)**
13. Find product with lowest price → Expected: **Mouse ($29)**
14. Print products with price greater than $100 → Expected: **Laptop, Monitor**
